Knowledge, productivity, and competence– are all results of CU Education.

The university is comprised of five curricula, providing best practices, information, and skills for every employee in a residential electronic systems company. Each curriculum consists of core and elective seminar courses; each designed and developed with one goal in mind – to make your company more successful and profitable.

CEDIA University Educational Curriculum:

Electronic Systems Technician

Electronic Systems Designer

Electronic Systems Project Management

Electronic Systems Business

Electronic Systems Customer Relations

CEDIA University Core Courses

Whether you are seeking to become a specialist in residential electronic systems or simply looking to be knowledgeable in a specialty area such as audio calibration or project management, learn from the best. CEDIA University Core Courses are designed as the industry standard for excellence in education. They are created by education and training professionals using proven instructional design methodology. Moreover, they specifically support industry competencies outlined by CEDIA subject matter experts and can provide a pathway to CEDIA Certification. Each individual will come-away from these courses with improved skill-sets and valuable take-home reference materials

CEDIA University Seminars

CEDIA University Seminars make up the elective portion of the five curricula. When you invest in training, you want to learn from instructors who have been there before – individuals with life expertise. These seminars are created and delivered by industry experts, providing new technology and business information through the unique perspective of experienced professionals. Seminars are also a great way to earn CEUs.

Education for Every Employee

For nearly 15 years, only CEDIA has offered the most comprehensive, unbiased, trusted education in the industry. And only CEDIA offers industry-specific education to build profitability across your entire team:

- Technicians
- Designers
- Project Managers
- Sales & Customer Service Representatives
- Marketing Professionals
- Operations Managers
- Finance Managers
- CEO

If your company isn't taking advantage of CEDIA education, you're missing the opportunity to build the world's finest custom electronic systems. Even worse, you're probably missing the profit that goes with them.
